ABBYY Aligner is a translation memory tool that aligns parallel texts in various languages. It allows to align up to 2,000 (up to 5,000, if a TMX format is available) texts and find corresponding segments of any length. Translation memory databases (TMX and RTF) can be easily created from the results of the alignment. And once they are created, they can be shared, published and referenced from any text source. As the main feature of ABBYY Aligner, it is the ability to align parallel texts in a variety of languages. The application can automatically align texts in over 30 languages, including English, French, Italian, German, Spanish, and Japanese, as well as other European languages. ABBYY Aligner is an ideal tool for aligning the text of websites and various documents into a TM database. The translator can perform a variety of alignment tasks (translation, multi-language alignment, translation synchronization, etc.) and get the results in RTF or TMX format for further processing or saving into TMX format. Also, ABBYY Aligner allows you to compare an aligned version of the original text against the result of the translation to find if there are any possible corrections. Key features of ABBYY Aligner: Full support for English, French, Italian, German, Spanish, Portuguese and Japanese languages. Supports multiple threads for faster processing. Excellent performance due to high speed computing. Alignment of up to 2,000 (up to 5,000) texts. Up to 12 languages can be used in the same workflow. Different output formats: RTF, Text, PDF and HTML. Advanced search filters and settings. Export alignment results in ABBYY Lingvo software. Automatic scanning of the text content for appropriate search filters. Synchronization of translation and localization activities. Translation memory (TM) saving. Automatically detecting translated sections of the document. The application is compatible with all major versions of Windows. Additional features: Unified state. Online help. The translation memory tool finds the corresponding segments of text. It can align multiple (up to 5,000) text blocks and save the results into TMX format. Its search features allow for automated text scanning for the detection of the aligned text segments. New in version 1.4.0: Perform language-based segmentation in English, French, German, Spanish,

Reviews BEST PRICE BACK TO BACK! Tod M. 2017-08-14 I am very satisfied with the fast and helpful support. I used 5 different browsers and all of them experienced a long loading time. I also called up the customer service and they were nice and very quick to help me out. I have purchased this product and I do not regret it. A product like this one is hard to find, if I had not been helped by this company, I would have paid exorbitant amounts for this product. I have purchased a lot of software, I must say, ABBYY is the best so far.Q: Detecting a bad app submission via metrics in Apple? I have an app that is currently live in the store, but the customer service team told me the app submission was rejected because one of the binary sizes is too big and they want me to reduce that binary size. I have not seen any rejection message from them regarding this binary size. Do I have any way to detect that binary size is too big? I am not using any third-party libraries or any tools for this. Any suggestions or ways to know that would be greatly appreciated. Thank you, A: It's not possible to know if your binary size is too big. The issue is that every application on the App Store has a certain size limit, which is part of the process of submitting your app. Apple is checking every application that they receive and that limit is right there in the submission process. That being said, it is possible that you might be trying to upload too large a binary. As you mentioned, Apple wants to reduce the size of the binary to make it easier on users (the upload process on the App Store is about 6 MB, which is huge!) The only real way to know if

What's New In?

ABBYY Aligner is a professional tool for aligning parallel texts in various languages and creating Translation Memory (TM) databases. The application was designed to find matching segments in parallel texts with the possibility of saving them into TMX or RTF formats. Based on ABBYY's advanced linguistic technology, ABBYY Aligner ensures excellent quality of parallel text alignment. The software has an intuitive interface and wide function capabilities for quick and efficient work. These strong points make ABBYY Aligner an indispensable and reliable tool for translators, language service providers, corporations and all who are involved in translation activities In late 2015, ABBYY announced the release of the latest edition of its alignment and translation platform, ABBYY Aligner 8.0. This tool is designed for the needs of translators and content marketers who are working with multiple languages and content in their day-to-day activities. We took a look at the new features and found out that the developer has gone above and beyond the usual improvements and added many great new features and functions. Some of the new features and functions included: ABBYY Aligner 8.0 Overview: ABBYY Aligner 8.0 is a cross-platform professional tool designed for all your translation needs. It's the perfect tool to speed up translation processes, boost efficiency and get the most out of your ABBYY Lingua team. ABBYY Aligner has been developed to improve the workflow and provide a seamless environment for translators and language service providers. Translators can work with and compare source and target language versions easily and quickly, saving time on repetitive tasks and making the translation process more efficient. ABBYY Aligner 8.0 Interface: Translators can work in one of two languages and compare the two versions easily using the ABBYY Aligner interface. The tool lets translators work in their native language or in either language. The integrated ABBYY Lingua language processing engine has been upgraded to version 8.0, incorporating the latest advancements in the translation process. Translators can now benefit from: Neural Network Technology: Neural Network Technology is available in ABBYY Lingua V8.0. This new technology lets translators make changes to the most difficult phrases by enabling translation and language processing decisions to be made by the machine. Analysis and Retrieval of Metadata: ABBYY Lingua V8.0 enables translators to work more efficiently with rich, structured data. With the latest version, translators can browse the source language document, select the relevant segments and export them to a TMX or RTF format using metadata such as subject, author, and others.
